SUMMARY

Software Engineer with 2+ years of hands-on experience designing robust, scalable, and high-concurrency systems using Golang and Java Spring Boot. Passionate about Clean Architecture, event-driven microservices, and high-throughput API ecosystems. Proven track record in leveraging Go primitives (Goroutines & Channels) and the Gin framework for seamless asynchronous processing, optimizing relational databases, and integrating distributed message brokers like Apache Kafka and RabbitMQ. Dedicated to writing clean, maintainable code, performing rigorous testing, and translating complex business requirements into resilient server-side solutions.

WORK EXPERIENCE

Golang Developer | Freelance Sep 2024 – Sep 2026
WFA (Remote), Indonesia

- Developed and maintained Golang-based backend applications and RESTful APIs, executing comprehensive application debugging, testing, and troubleshooting.
- Implemented RabbitMQ and Apache Kafka as message brokers to support asynchronous communication and data exchange between backend microservices, significantly improving system reliability.
- Architected the core backend infrastructure of a monolithic internal management system using Golang to securely handle business logic for security guard operations.
- Engineered core RESTful APIs and normalized PostgreSQL schemas to accurately manage employee records, department hierarchies, and operational data.
- Utilized Go Coroutines and the Gin framework to handle concurrent user requests smoothly and optimize overall server response times.

Backend Engineering Trainee | SYNRGY Academy & Mar 2024 – Aug 2024
BCA Corporate Partnership
Jakarta, Indonesia

- Engineered an enterprise-grade core banking API system, collaborating closely with an Agile team to deliver secure and scalable backend solutions.
- Developed and secured core RESTful APIs using modern backend frameworks and rigorous security protocols (OAuth2/JWT) for banking operations.
- Optimized database schemas and executed containerization strategies using Docker to ensure consistent deployment environments.

PROJECTS

Orgysync Web Application | Backend Development 2025
Project

- Engineered highly concurrent backend services utilizing Golang to ensure rapid data synchronization and reliable system performance.
- Implemented Goroutines and Channels for efficient asynchronous data processing and robust API endpoints.

SATU Banking API (Core Banking) | SYNRGY Academy 2024
Final Project

- Developed an enterprise-grade core banking API system utilizing robust server-side frameworks and secure RESTful integration.
- Prototyped event-driven architecture concepts for service decoupling and asynchronous data flows.

TECHNICAL SKILLS

- **Languages:** Golang (Go), Java, Python, SQL, JavaScript, TypeScript

- **Backend & Concurrency:** RESTful APIs, Goroutines, Gin, Spring Boot, Microservices, Clean Architecture
- **Message Brokers & DBs:** RabbitMQ, Apache Kafka, PostgreSQL, MySQL, Redis, MongoDB
- **Infrastructure & Tools:** Docker, AWS, Git, GitLab, GitHub, CI/CD, Postman, Jira
- **Security:** OAuth2, JWT, Authentication & Authorization

EDUCATION

Informatics and Business Institute Darmajaya Oct 2019 – Nov 2023
Bachelor's Degree (S1) in Informatics Engineering | GPA: 3.59 | Bandar Lampung
